

The White House  
1600 Pennsylvania Avenue NW  
Washington, DC 20500

Dear Mr. President:

You may have heard that in 2011, the World Health Organization classified radiofrequency radiation as a Class 2B carcinogen. This same radiation is emitted by cell phones, cordless phones, Wi-Fi, antennas, etc. – this radiation is becoming harder and harder to escape in the 21<sup>st</sup> century. Although all of us are sensitive to this radiation to an extent, about 3-5% of people are electrohypersensitive, meaning they are especially sensitive to electromagnetic radiation and excessive toxic exposure to RF radiation can cause excessive, even debilitating, pain. Given that today, we are exposed to 100 million times more background radiofrequency radiation than our grandparents were, our symptoms are being highly exacerbated and many of us can feel our bodies being pushed to the limits. Even those that are not EHS are starting to get symptoms that are unheard of in the demographics they're showing up in: back pains, chest pains, heart palpitations, migraines, nose bleeds, tinnitus, etc.

Although Wikipedia claims there is no scientific evidence for EHS, peer-reviewed science shows that this radiation *does* have an effect on our bodies and it only makes sense that there may be certain symptoms we can link to RF radiation. In 2016, Olga Sheean sent a report to the Mayor of Toronto which generated an overwhelming response from people all over the world. Many of them have electromagnetic hypersensitivity (EHS), but some of them are discovering this information for the first time and are alarmed by how the dangers of microwave radiation have been distorted, downplayed and denied by the wireless industry and those elected to protect our well-being. While minimizing the amount of radiofrequency radiation in our environment is prudent, the damage is already being done. Thousands worldwide are fleeing their homes to escape this radiation and can no longer live a normal life; they live as refugees, sleeping their cars, homeless, jobless, and friendless. This is drastically different from what we pictured the American dream to be.

In Sweden, EHS is listed as a valid disability and individuals can be diagnosed and receive recovery treatment. While statistics show that EHS only affects about 3% of the US population, this means that 9 million of us are suffering on a daily basis due to inadequate safety standards. Most doctors are unaware of the impacts of RF radiation on biological organisms; if we go to the clinic, we are ridiculed and made light of.

I ask that you recognize electromagnetic hypersensitive as a valid disability in the United States. While the only way to prevent EHS is to prevent prolonged exposure to toxic levels of radiofrequency radiation – a feat that is becoming extraordinarily difficult in today's wireless world – recognizing EHS as a valid disability is a step forward in protecting the rights of those who are unable to work due to debilitating pain caused by EMR in their workplace environments.

Those of us suffering from being exposed to toxic levels of electromagnetic radiation have been living in unimaginable pain – forgotten, neglected, abused and ridiculed – for decades; nobody is helping us, or understands this disability. We are fleeing our homes and jobs, and the numbers afflicted keep rising. Please do not forget us. Please stick to your promise and fight for all of us.

Please make America Great Again,  
EMF Sufferer
