

The White House  
1600 Pennsylvania Avenue NW  
Washington, DC 20500

Dear Mr. President:

The United States is one of the world leaders when it comes to technology, but when it comes to health, we are lagging behind, big-time. The FCC standards for radiofrequency radiation are among the most permissive in the world; our federal limits are actually *3 MILLION* times higher than what the BioInitiative Report (2012) found to be a safe ceiling level. Because of our inadequate safety standards, the American public is not being protected from this radiation, which the World Health Organization classified in 2011 as a Class 2B carcinogen, in the same category as toxins such as lead and DDT. It is crucial that we catch up with the rest of the world and impose more stringent safety standards to better protect the public; right now, our standards are as useless as not having any at all.

It is also imperative that Wi-Fi be banned in public places, including libraries, hospitals, and schools. Because our safety standards are well above levels known to cause biological harm in humans, animals, and the environment, people are getting ill from the radiation emitted by cell phones, cell tower antennas, Wi-Fi, and smart-meters. Many people are electrohypersensitive, meaning they are especially sensitive to this radiation. These people can no longer live in urban areas or visit buildings that have complimentary Wi-Fi as the radiation emitted by these facilities causes debilitating pain for them. It could even be said that such practices are unconstitutional, as public Wi-Fi actively discriminates against the disabled; EHS is recognized as a valid disability in Sweden, and receive certain disability benefits. However, in the United States, people with EHS are frequently told that “it’s all in their head” or the disease must be psychosomatic; no matter what Wikipedia wishes to report on this topic, this could not be farther from the case. Thousands of peer-reviewed scientific studies have proven that radiofrequency radiation in the toxic doses it is delivered in today can cause biological harm, not only in humans, but other animals, and even the surrounding environment. Bee and bird populations are being decimated as a result of this radiation, as the electromagnetic fields distort their sense of direction and ability to return to their colonies. Thus, public Wi-Fi discriminates against people with EHS, and people in general who want to protect their health. Given that Wi-Fi emits a Class 2B carcinogen, the United States should join the numerous European countries already cracking down on this radiation and introduce better safety precautions; namely banning Wi-Fi in public places, especially hospitals and schools where our most vulnerable and susceptible populations are.

Those of us suffering from being exposed to toxic levels of electromagnetic radiation have been living in unimaginable pain – forgotten, neglected, abused and ridiculed – for decades; nobody is helping us, or understands this disability. We are fleeing our homes and jobs, and the numbers afflicted keep rising. Please do not forget us. Please stick to your promise and fight for all of us.

Please make America Great Again,  
EMF Sufferer
